I. Argument

The Examiner cites the description in the cited reference Bhagwat at column 9, line 19 to column 10, line 15, but ignores that portion of the description that refers to the polling procedure required. It is indicated throughout this excerpt, that the WAT, to initiate registration, receives an invitation poll frame and replies to it by sending an invitation payload frame. Applicant submits that this polling procedure is a request to which there follows a response. Accordingly, the system of Bhagwat includes a request-response mechanism that requires a separate request.

Applicant further submits that, when the device of Bhagwat requires a new type of capability, the system of Bhagwat is not capable of delivering additional payload information unless a further invitation payload frame is sent. This practically means a reregistration of the device and possibly also a deregistration prior to reregistration. Therefore the cited reference Bhagwat does not teach the transmission of capability information without a separate request as required by the claims of this application.

It is respectfully submitted that all of the claims, as presented, are clearly novel and patentable over the prior art of record. Accordingly, the Board of Appeals is respectfully requested to favorably consider the rejected claims and to reverse the final rejections, thereby enabling this application to issue as a U.S. Letters Patent.

The Commissioner is hereby authorized to charge payment for any fees associated with this communication or credit any over payment to Deposit Account No. 16-1350.

Respectfully submitted,

Geza C. Ziegler, Jr.
